Input

- google collects analytics → company wants demographic data for targeted marketing for us
  - ↳ chat interface where specifications about demographic data

interface → structured data for their specifications restricted from data we bought at recently google

Dispute

- customer raises dispute about data in chat interface

System

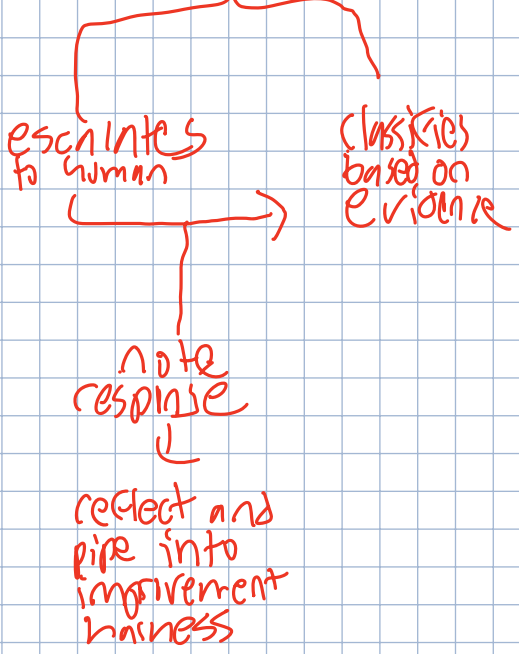

① verifies complaint justified } convert this contract into checkboxes that get ticked off when we generate smth

disagree deterministically
- respond, with evidence, mark as resolved
- UI → character goes back
- same with change order + new order

* gray area
- first try to categorize like problem with analytics
- by investigating, interrogating, show zoom into chat
- internal policy to decide to minimize human review

agree
- real inference for free. should be avoided by questioning

- to make claims stronger, define the criteria empirical e.g data bounds, or agent asks

customer buys data about demographics
our agent asks specifications about demographics that clarify customer's requirements before inference

this also serves evidence towards what we agreed upon reducing potential grey area

red

minimizing grey area is priority

green

- conclusions from interview initial become evidence
